

We offer **Laparoscopic Spaying**

At **Thameswood Vets** we understand that you want only the best for your pet. That is why we use minimally invasive techniques such as Laparoscopy or “keyhole surgery”

- ✓ Reduced pain levels
- ✓ Faster healing time
- ✓ Fewer complications
- ✓ Smaller wounds
- ✓ Quicker return to exercise

If you are **not planning** to breed from your dog, we would recommend that they be neutered (or spayed for female dogs). Laparoscopic spaying (neutering) will help prevent unwanted pregnancies and seasons, reduce and in some cases, **eliminate the risk of life-threatening conditions**
